

Transform your passion  
for research into  
compelling words.

“Readable applications”  
that anyone can write.

# The three barriers everyone faces.

How should I write it to get my point across... That's what I understand least of all.

First-time application. No one told me what to write.

Each one, fixed by hand.  
That alone takes up the whole day.

# This AI guides you to create applications that get read.

- Specialized for JSPS Grant-in-Aid for Scientific Research Application Guidelines
- Automatically generates research objectives, plans, and societal significance
- Poses additional questions based on input to refine text that resonates with reviewers

# What this AI can do

Solve the reason you can't write  
with “questions”

I can write grant proposals that get  
approved.

Research objectives and social  
significance...AI handles it all.

Transform ambiguous words  
into resonant expressions.

Fully compatible with  
technical terms in science  
and engineering.

# This is when it comes in handy.

I have ideas. But when they won't come out in words.

When you've written something but aren't sure if it gets the point across.

When multiple authors collaborate and the writing feels disjointed.

Deadline approaching, no time left.
